operation**

# Grain Control

## Facilitate operation of equipment.

Grain Control is the next generation of cloud-based management for your grain equipment. The different products within Grain Control allow you, as a professional farmer, to work efficiently and gain beneficial insights into important agricultural facility processes. This leads to a more successful business and a healthier working environment. Switch to an ideal system solution for better peace of mind at work.

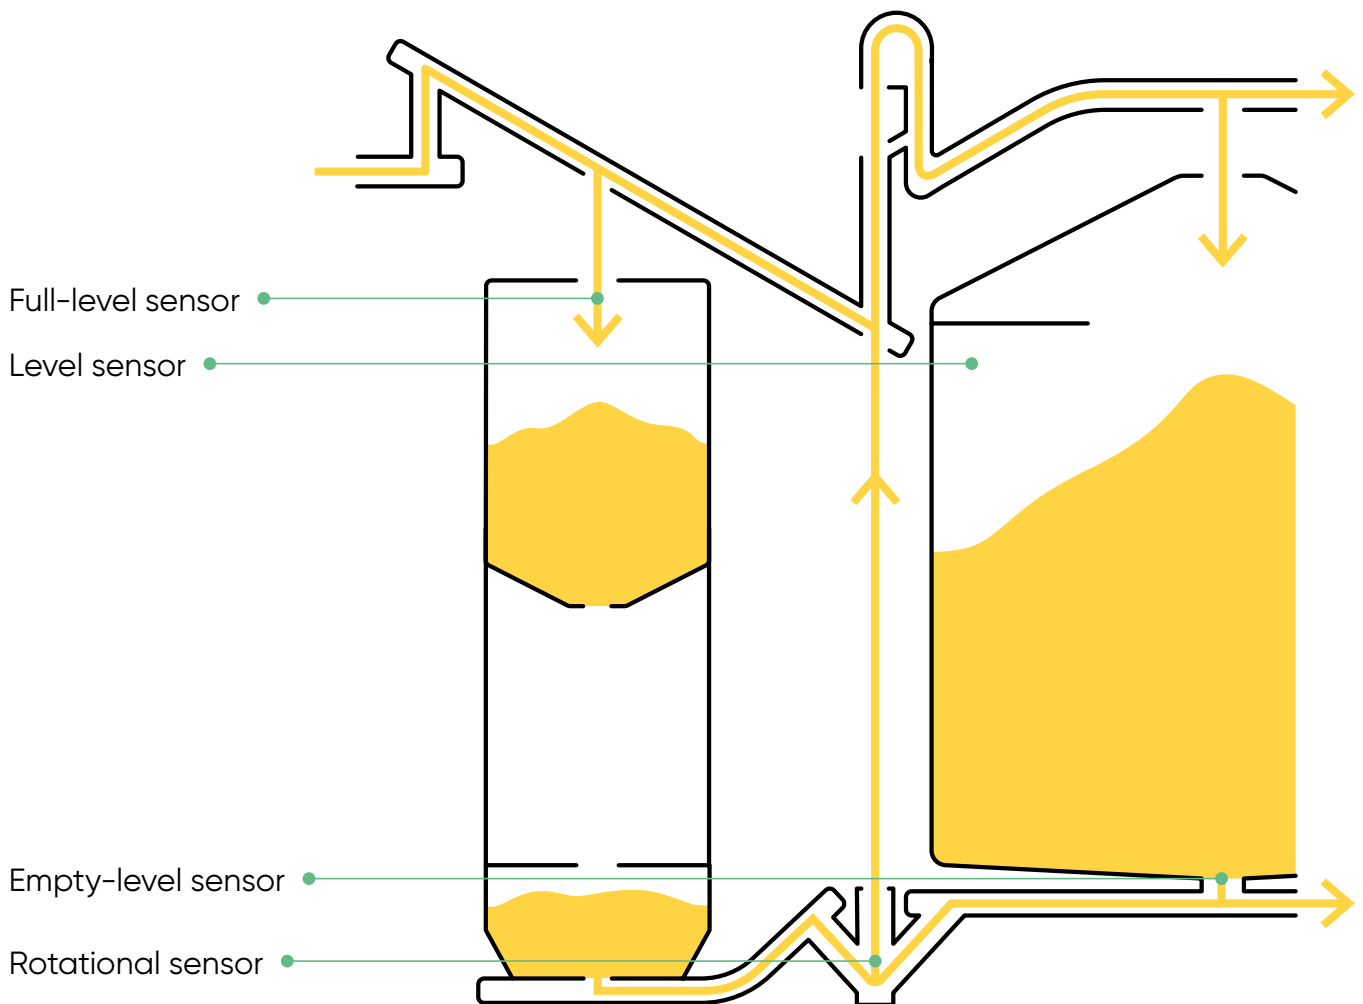

## Grain Control Flow

Grain Control Flow takes usability to a new level with cloud-based management of your grain equipment. Grain Control Flow simplifies your daily silo plan, including transport planning and storage of your grain. The result is a secure operation, efficiently minimizing the risk of grain being mixed. Everything can be handled remote, thus saving time and money. It's easy and cost-effective to add accessory or to extend the facility. Change to the ideal system solution for a grain flow with a future-proof economy.

- Full grain overview with the silo plan that comes in an innovative interface.
- Easier transport planning with an inventory view of your grain. The system automatically takes care of the transports.
- Safe operation that minimizes the risk of grain being mixed as well as flow control that optimizes transport speed without blocking or stopping.
- Simplified remote support, service and upgrade of system performance.
- Easy, quick and cost-effective to extend the facility with products such as silos, driers, conveyors and elevators.
- An investment that yields sustainable profitability in your grain management.

# This is how it works

Grain Control Flow uses collected data from all sensors in the facility to automatically control the processes. This is presented in user-friendly interfaces, such as Grain App.

# Control cabinet & Screen

As a standard for Grain Control Flow, a control panel, screen, and sensors are always included.

## Control Cabinet

All sensors in Grain Control Flow are connected to a control cabinet, which is IP-rated and corrosion-rated, meaning it withstands weather conditions. The size of the control cabinet is customized based on the extent of the facility.

## Screen

As a standard for Grain Control Flow, the interface is displayed either on a touchscreen of 10" to 15", that is mounted on the control cabinet, or on a PC with any number of computer screens.

# Sensors

The number of sensors for Grain Control Flow is adjusted based on the size of the facility and the choice of equipment. Beyond the basic needs, there is also the possibility to add additional sensors for various types of functions.

## Additions

Grain Control Flow can be equipped with additional sensors, such as a full-level sensor (as shown in the image to the right), empty-level sensor, level sensor and rotation sensor.

**"Vi är jätte nöjda med vårt styrsystem Grain Control Flow. Det har ett logiskt och bra upplägg! Därför lätt att lära sig och att använda! Vi är även mycket nöjda med supporten vi fått under och efter installation."**

– Magnus Andersson, Tråvad Växtodling AB

# Interface

Grain Control Flow use a local interface as well as Grain App, which is used by several Grain Cloud products. In both interfaces, you can easily remotely overview and control processes. You can also receive notifications for alarms and suggested actions. The smart interfaces display data in clear views with the option to look further into detail when needed.

# THE PIONEERS OF DIGITAL GRAIN STORAGE

Grain Cloud is based on the idea of total control of your grain work. Leading to superior harvest quality and invaluable insights. Founded in 1914 we have for a long time been the front runner within the professional agriculture. And are today, pioneers of digital grain storage. Experience a new world of visionary digital solutions for your daily grain handling. Always aimed at increased profitability.
